VI. ELIGIBILITY REQUIREMENTS

Incentives may be provided for reducing the Lighting Power Density (LPD) in watts per square foot from the baseline lighting design that complies with the Interior Power Lighting Allowance obtained from ASHRAE/IESNA 90.1 – 2004. Wattage reduction for either space-by-space or building-area method must be at least 10% more efficient than code requirements to qualify for incentives.

All projects must:

- Be a new construction project or, on a case-by-case basis, an extensive renovation project in an existing facility that involves a complete lighting redesign and the installation of new fixtures in the building or renovated space.
- Provide maintained lighting levels in accordance with the recommendations of the Illuminating Engineering Society of North America (IESNA).
- Provide high quality lighting achieving appropriate levels of glare control, color rendering, lighting uniformity, and other lighting quality parameters deemed necessary by BGE.

All project submittals must include the following supporting documentation:

- Lighting layout plans
- Site-specific photometric reports or point-by-point lighting calculations, if deemed necessary by BGE.
- Manufacturer's specification sheets for all luminaires, lamps and ballasts
- Lighting fixture schedule including manufacturer, model number, and rated wattage
- Supporting calculations demonstrating installed lighting wattage
